

eco sac's special PVC material has been treated to make the water safe for human consumption. That means that even if you don't want to drink it, you can safely fill your swimming pool or fish pond with the water from it, knowing that you have optimal water quality

eco sac® is the best rainwater storage solution for you because:

- it will be discretely located under your deck or house so it won't ruin your garden aesthetics
- it will utilise previously wasted space rather than precious garden space
- it can be taken with you when you move house
- it can capture water faster than traditional tanks
- it can use multiple sacks which all fill at the same rate
- it is easy to install
- it can be installed in small and difficult to access locations
- it has no moving parts
- it is guaranteed to not leak
- it is algae resistant
- the water is potable (i.e. the water is safe from contamination)
- it is easily transported to the desired location
- it is Australian owned and manufactured

**The superior rain
water storage system
that hides away
under floors and decks**

Would you like to water your garden whenever you like?

Would you like to be able to wash your car with a hose?

Would you like to be able to use your water pressure cleaner?

Do you want to catch and save rain water but don't want a tank in your garden?

eco sac® is the revolutionary new generation of rain water storage systems (patent pending)

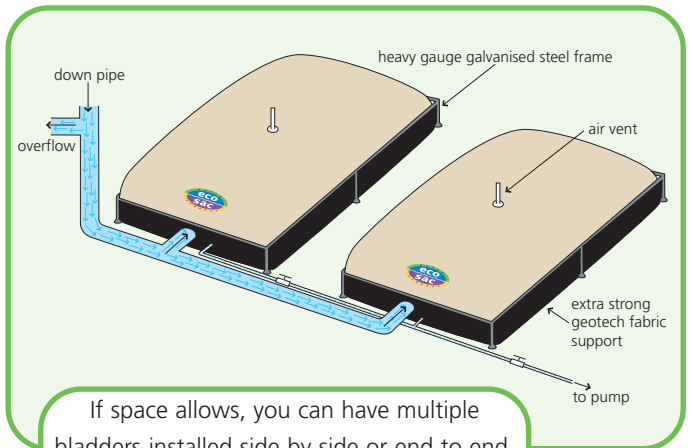

Rain water flows from the roof into the downpipe and then into the bladder. Once the bladder is full any excess rainwater diverts into the existing storm water.

eco sac® can be connected to downpipes on all sides of the house enabling more water to be collected than with a traditional tank.

Its flexible but durable PVC bladder system can collect rainwater faster than other systems and still be hidden by sitting neatly under your house or deck area.

If space allows, you can have multiple bladders installed side by side or end to end, with pipes connecting them so that they can all fill at the same time. When all the bladders are full any excess water is diverted straight to the existing stormwater drain.

eco sac® comes in 54 different sizes & configurations ranging from 2,200 litre capacity up to as much as you can fit in your space. Ask your installer about available rebates and installation incentives.

eco sac® can be used in a gravity feed system or with a pump to water your garden and reticulate into your washing machine and toilets. An optional mains water changeover control will ensure continuity of water supply. Many other accessories are available upon request.
